DACSINC ERP — PROJECT GUIDE · UPDATED 9 OCT 2026

How the Dacsinc ERP *works* — and where the project stands.

For everyone joining the project: the business, the end-to-end flow, who controls what, the business and functional requirements, how to build and deploy, and the task list — delivered, open from the 8 Oct meeting, and Phase 2.

01 · Overview

Overview

What the company does, what the system is for, and how the pieces fit.

The business

Dac's Inc supplies **uniforms and garments** to corporate and institutional customers (hotels, restaurants, schools, hospitals) and runs **retail POS stores**. Customer orders are filled in two ways — **trade items** bought and resold, and **BOM items** made by outside **jobbers** (the company buys the fabric and trims, sends them to the jobber and receives finished garments). Pieces or panels can also go to **embroidery** jobbers.

SALES
Orders & approvals
CRM, Sales Orders, merchandiser and final approval.

SUPPLY
Buy & make
Raw material, purchase, subcontracting, embroidery.

FULFIL
Pick, dispatch, bill
Pick List → Delivery Note → Sales Invoice → logistics.

RETAIL
POS stores
Shifts, billing, cash drawer, store stock.

What the system solves

- **One order tracked end to end** on one dashboard (Order Flow), with the next action for each order.
- **No cross-order leaks** — material bought for one order is never used by another.
- **No over-ordering, no duplicates** — purchases capped at each order line's need; one draft per source line.
- **Approvals** — merchandiser, then a named final approver.
- **Controlled visibility** — merchandisers see their orders, stores their store, master data stays inside.
- **Store cash control** — counted every shift, carried to the next, reported.
- **One agreed access sheet** — the client signs off who may do what; saving applies it.

System landscape

COMPONENT	WHAT IT IS	NOTES
ERPNext v15 (frappe, erpnext, hrms, india_compliance)	Standard platform: accounts, stock, buying, selling, HR, GST	Small local edits are recorded in `docs/core-modifications.md` at the bench root.
erp_dacsinc_custom	The custom app — all Dacsinc business logic	Its hooks run before ERPNext's.
mobile_app_360ithub	Mobile app backend (HR, attendance, CRM)	Reads settings through the API as the signed-in user.
fcm_360ithub · webtoolex_whatsapp	Push notifications · WhatsApp	

Warehouses

- **VV Puram - IND** — main stock warehouse; all customer picking; supplies the stores.
- **Jobers Warehouse - IND** — raw material sent to jobbers.
- **Store warehouses** — one per POS store (JP Nagar, Rajajinagar, Varthur…).

Pages & links

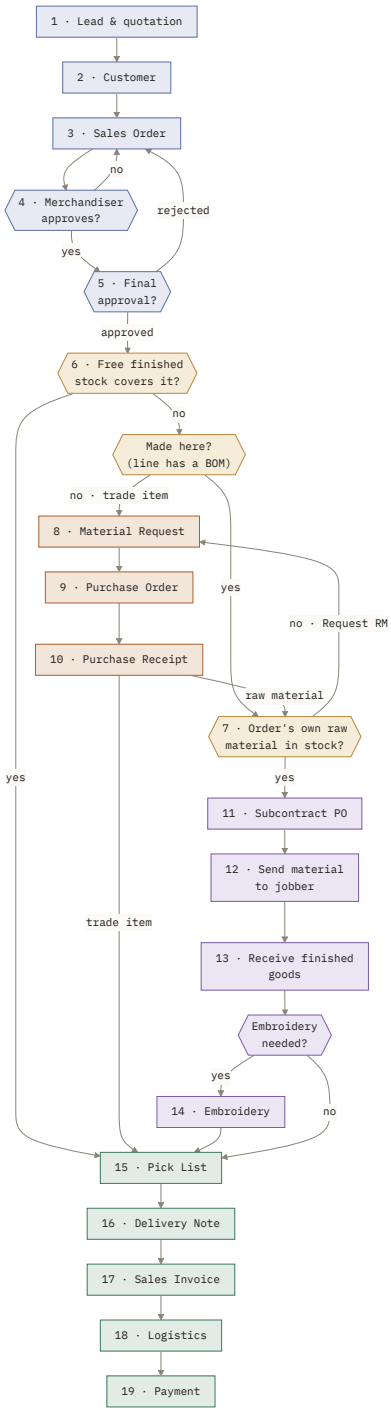

Every screen built for this project, with its address. Click to open; **Copy link** copies the full address of this site, ready to share.

PAGE	ADDRESS	WHO CAN OPEN IT	WHAT IT IS FOR
Order Flow (dashboard)	`/app/order-flow`	Staff roles given on the access sheet (Merchandiser, Purchase, Production, Warehouse, Accounts, Finance, Logistics…); admins see every tab	Daily work: approvals, Sales Tracker, Pick Lists, Purchase Flow, Job Work, Stock, Pending DN/SI, Finance, Embroidery, Logistics
Roles & Permissions (desk)	`/app/roles-and-permissions`	Admin · System Manager · HR Manager (limited)	Give users their role profiles; see which users hold which profile
Roles & permissions – access sheet	`/roles-and-permissions`	Admin (edit) · System Manager (resets, apply)	The agreed access sheet: document rights per role (V N E S C D O), Order Flow tabs (✓ / A), blank worksheets to print
Order flow rules	`/order-flow-rules`	Any signed-in user	The rules every screen enforces, the messages users see, and test steps
Project guide (this page)	`/project-guide`	Any signed-in user	Overview, flow, roles, BRD, FRD, task status, developer and deploy notes
Process flow	`/process-flow`	Anyone (public)	Stage-by-stage overview for the client – older (Aug 2026); this guide wins where they differ
Workflow diagram	`/process-flow-diagram`	Anyone (public)	One-page diagram, downloadable as PNG / SVG – older (Aug 2026)
Store Cash Book (report)	`/app/query-report/Store Cash Book`	POS Admin · POS Store Manager (own store) · System Manager	One line per store shift: opening, sales by mode, counted cash, short / extra, cash left
Point of Sale	`/app/point-of-sale`	Store users (POS Store Manager, POS Admin)	Open shift, bill, close shift

Business flow

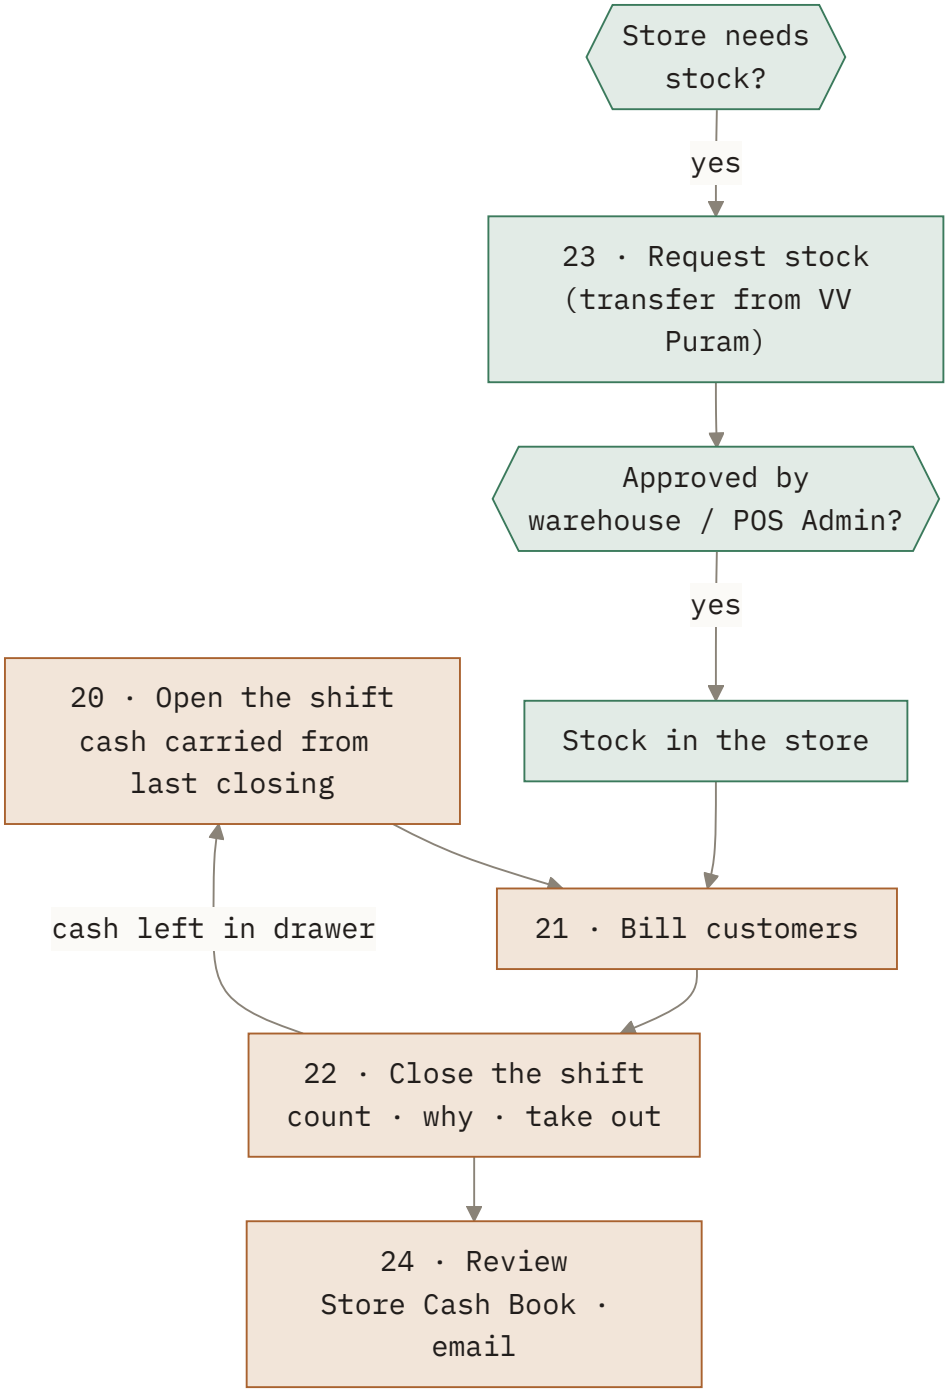

Two separate journeys. Pick one, follow the arrows — **six-sided boxes are decisions** — then click any box to open that step's screen, rules and tips below.

A · Customer order — from enquiry to payment

Sell · Plan · Buy · Make · Fulfil · ⬡ decision · click a box to open its step

B · POS store — one shift, and store stock

Steps – Customer order

1 Lead & quotation

Sell

DAC CRM · DAC CRM Head

SCREEN / DOCUMENT	Lead · Event Activity · Business Contacts · Quotation
WHAT HAPPENS	CRM follows the enquiry; the quotation is shared with the lead owner.
RULES	• Daily / weekly / monthly CRM reports are emailed automatically. • Rate 0 is not allowed.
TIP / NOTE	The Sales Order's Lead Owner comes from the Lead.

2 Customer

Sell

DAC CRM · Admin

SCREEN / DOCUMENT	Customer
WHAT HAPPENS	Each customer is assigned a merchandiser.
RULES	• Merchandiser, Industry and POS Store change only by roles in Admin Settings › Customer. • Customer data printed / exported only by Accounts.
TIP / NOTE	List action Assign Merchandiser sets many customers at once.

3 Sales Order

Sell

DAC CRM · Merchandiser

SCREEN / DOCUMENT	Sales Order (Draft)
WHAT HAPPENS	Order entered with items, qty, rate and BOM for made items.
RULES	• Shared with the Lead Owner automatically. • Rate 0 is not allowed.
TIP / NOTE	A row with a BOM is made through a jobber; without a BOM it is bought.

4 Merchandiser approval

Sell

Merchandiser

SCREEN / DOCUMENT	Order Flow › SO Approvals
WHAT HAPPENS	The merchandiser checks and approves through Verify Customer Details.
RULES	• Addresses are set on this order only. • The creator may approve this step.
TIP / NOTE	Unassigned customers' orders appear for every merchandiser to claim.

5 Final approval

Sell

Sales Order Final Approver

SCREEN / DOCUMENT	Order Flow › SO Approvals › Pending Final SO Approval
WHAT HAPPENS	A named approver approves or rejects; a BOM-split check confirms which rows are made and which are bought.
RULES	• Never the creator. • Approvers are set user-wise in Admin Settings.
TIP / NOTE	A rejected order can be re-approved, which resubmits it.

6 Stock check

Plan

Merchandiser · Purchase

SCREEN / DOCUMENT	Sales Order › Item Stock & Action Plan
WHAT HAPPENS	Per line: Ordered · Delivered · Still to Cover · Free Finished Stock · To Make, with the next action.
RULES	• Stock picked or bought for other orders is not counted as free.
TIP / NOTE	Next Action lists every pending step: source, ship, invoice.

7 Raw material plan

Plan

Merchandiser · Production

SCREEN / DOCUMENT	Sales Order › RM table under each BOM line
WHAT HAPPENS	Needed · In Stock for this Order · Requested / On the Way · To Request.
RULES	• Only material bought for this order plus free stock counts. • Lines of one order share material in line order. • Short → Request RM.
TIP / NOTE	Grey text names other orders' stock – it stays with them.

8 Material Request

Buy

Merchandiser · Production · Purchase

SCREEN / DOCUMENT	Material Request (SO buttons or the MR planner)
WHAT HAPPENS	Requests raw material or trade items for the order.
RULES	• Capped at what the order still needs; a draft MR already counts.
TIP / NOTE	The MR planner requests for several orders at once.

9 Purchase Order

Buy

Purchase Executive · Purchase Manager

SCREEN / DOCUMENT	Purchase Order › Fetch Raw Materials / Fetch Pending Sales Orders / Get Items from MR
WHAT HAPPENS	Buys material and trade items.
RULES	• All POs for an order line together ≤ its qty (drafts count). • Fetch prompts never offer more than saving allows. • No plain PO for BOM items.
TIP / NOTE	Fetch dialogs add to the PO; they never replace rows.

10 Purchase Receipt

Buy

Warehouse · Inward

SCREEN / DOCUMENT	Purchase Receipt → Purchase Invoice
WHAT HAPPENS	Goods received; material received against an order is bought for that order.
RULES	• One draft per source line.
TIP / NOTE	A receipt for a sold item drafts a put-away Pick List.

11 Subcontract PO

Make

Merchandiser · Production · Purchase

SCREEN / DOCUMENT	Purchase Order (subcontracted)
WHAT HAPPENS	Orders the jobber's work for the finished qty the material covers.
RULES	• Offered only when the RM table says In Stock. • Submit refused unless all rows' material is available together.
TIP / NOTE	A partial PO is fine; the rest stays claimable.

12 Send material to jobber

Make

Production · Merchandiser (own orders)

SCREEN / DOCUMENT	PO › Create SCO & Material Transfer
WHAT HAPPENS	Creates the Subcontracting Order and moves material to the jobber.
RULES	• Send at most this PO's own stock. • Picked stock and other orders' material can never be sent.
TIP / NOTE	The dialog shows actual warehouse stock under each material.

13 Receive finished goods

Make

Warehouse · Inward

SCREEN / DOCUMENT	PO › Receive Goods for SCO
WHAT HAPPENS	Creates the Subcontracting Receipt and the Purchase Receipt.
RULES	• Over-collection within the allowed % is booked as extra.
TIP / NOTE	MOM 8 Oct: qty to receive should start at 0, plus invoice no. and date (open).

14 Embroidery

Make

Production · Merchandiser

SCREEN / DOCUMENT	Embroidery Work Order (Full Piece / Panel) · Uniform Embroidery Transfer
WHAT HAPPENS	Sends pieces or panels for embroidery and receives them back.
RULES	• From order stock only draft Pick List qty can be sent; that Pick List is held until goods return. • One Full Piece allowance per (order, item).
TIP / NOTE	MOM 8 Oct: many orders to one embroidery order, design name in the tab (open).

15 Pick List

Fulfil

Merchandiser · Packing Team · Warehouse

SCREEN / DOCUMENT	Pick List (VV Puram)
WHAT HAPPENS	Picks the order's goods.
RULES	• Claims only free stock. • Submit asks the qty actually picked – it can only go down.
TIP / NOTE	Picked stock is held for this order.

16 Delivery Note

Fulfil

Accounts · Warehouse

SCREEN / DOCUMENT	Delivery Note from the Pick List
WHAT HAPPENS	Dispatches the goods.
RULES	• One route: Pick List → DN → SI. • Rows from the Pick List are locked.

17 Sales Invoice

Fulfil

Accounts Executive · Accounts Manager

SCREEN / DOCUMENT	Sales Invoice from the DN
WHAT HAPPENS	Bills the customer.
RULES	• Rate locked to the order's rate. • Update-Stock invoice against a Sales Order is refused.

18 Logistics

Fulfil

Logistics

SCREEN / DOCUMENT	Order Flow › Logistics
WHAT HAPPENS	Records transporter, LR No and signed copy.
RULES	• Every submitted invoice without LR No and Signed Copy is listed.
TIP / NOTE	One Update dialog for all three.

19 Payment

Fulfil

Finance · Accounts

SCREEN / DOCUMENT	Payment Entry · Order Flow › Finance
WHAT HAPPENS	Collects and pays.
RULES	• Receivables, supplier and jobber payables are followed on Finance. • Receive / Pay on the row: mode, amount, reference, bank charges, TDS, write-off; confirmed before submit.

Order status words (Sales Tracker)

Not Dispatched → To Be Dispatched (Draft) → Dispatched → Delivered (Draft) → Delivered → Completed

Roles & control

Pick a role to see what it does, which dashboard tabs it uses and what limits it. Below: where each kind of access is changed.

DAC CRM · Sales executive

MAIN WORK

- Leads, follow-ups, quotations
- Creates Sales Orders

ORDER FLOW TABS

- Sales Tracker (as given on the sheet)

CONTROL / LIMITS

- Own customers only (O)

DAC CRM Head · Sales manager

MAIN WORK

- Team's CRM and reports
- Sales Orders

ORDER FLOW TABS

- Sales Tracker

CONTROL / LIMITS

- Head view in CRM

Merchandiser User · Merchandiser

MAIN WORK

- Approves orders (merchandiser step)
- Plans raw material, Request RM
- Subcontract POs; sends material to jobber (own orders)
- Pick Lists, embroidery

ORDER FLOW TABS

- SO Approvals
- Sales Tracker
- Pick Lists
- Job Work
- Stock (requested — MOM 8 Oct)

CONTROL / LIMITS

- Sees orders they created; a toggle adds their customers' orders
- Only subcontracted POs
- Stock Entry only for own jobber transfers

Sales Order Final Approver · Management

MAIN WORK

- Final approval / rejection

ORDER FLOW TABS

- SO Approvals › Pending Final SO Approval
- Rejected

CONTROL / LIMITS

- Set user-wise in Admin Settings
- Never approves own order

Purchase Executive / Manager · Purchase

MAIN WORK

- Material Requests, plain POs
- Receipts, purchase invoices

ORDER FLOW TABS

- Purchase Flow
- Sales Tracker › Material Requests

CONTROL / LIMITS

- PO price check if listed in Admin Settings

Production Manager / Assistant · Production

MAIN WORK

- BOMs, subcontracting, embroidery

ORDER FLOW TABS

- Job Work
- Embroidery Transfers
- Stock (requested — MOM 8 Oct)

CONTROL / LIMITS

- Subcontracting PO analysis report (requested — MOM 8 Oct)

Warehouse Incharge / Executive · Warehouse / Inward

MAIN WORK

- Receipts, stock entries, picking
- Approves POS supply transfers
- Approves POS store requests and makes the transfer (POS HO workspace)

ORDER FLOW TABS

- Pick Lists
- Stock Tracker

CONTROL / LIMITS

- Held stock protected unless listed in Admin Settings › Stock Hold

Packing Team · `Packing`

MAIN WORK
- Pick Lists

ORDER FLOW TABS
- Pick Lists

CONTROL / LIMITS
As on the access sheet.

Accounts Executive / Manager · `Accounts`

MAIN WORK
- Delivery Notes, Sales Invoices
- Purchase invoices

ORDER FLOW TABS
- Pending DN/SI
- Finance

CONTROL / LIMITS
- Only roles that may print / export customer, supplier and price data

Finance Executive / Collection · `Finance`

MAIN WORK
- Receivables, collections

ORDER FLOW TABS
- Finance

CONTROL / LIMITS
As on the access sheet.

Logistics · `Logistics`

MAIN WORK
- Transporter, LR No, signed copy

ORDER FLOW TABS
- Logistics

CONTROL / LIMITS
As on the access sheet.

POS Admin · `Operations store manager`

MAIN WORK
- All stores, transfers, POS reports

ORDER FLOW TABS
- None – works in POS

CONTROL / LIMITS
- All stores
- Approves supply transfers

POS Store Manager · `Store manager`

MAIN WORK
- Own store's shifts, bills, stock requests (sent for HO approval; submit HO's transfer on arrival)
- Store Cash Book

ORDER FLOW TABS
- None – works in POS

CONTROL / LIMITS
- Own store and its brands only

HR Manager · `HR`

MAIN WORK
- Creates users, gives sheet profiles

ORDER FLOW TABS
–

CONTROL / LIMITS
- Never gives admin roles, never edits admins or self, never deletes

Admin · `Business admin`

MAIN WORK
- Edits the access sheet
- Admin Settings

ORDER FLOW TABS
- All

CONTROL / LIMITS
- Sees everything

System Manager · `IT / 360 IT Hub`

MAIN WORK
- Resets, sync, apply
- Bulk Add Stock

ORDER FLOW TABS
- All

CONTROL / LIMITS
- Sees everything

Where access is controlled — change it only here

WHAT	WHERE	WHO MAY CHANGE IT
Document rights per role	Roles & permissions › Document access (V N E S C D O)	Admin saves · System Manager resets / syncs / applies
Order Flow tabs per role	Roles & permissions › Order Flow dashboard (✓ see, A act)	Admin
Which roles a user has	Desk page **Roles & Permissions** (profiles)	Admin · System Manager · HR Manager (limited)
Final approvers	Admin Settings › Sales Order final approvers	Admin · System Manager
Customer's merchandiser / industry / store	Customer form · list "Assign Merchandiser"	Roles in Admin Settings › Customer
Users allowed to use held stock	Admin Settings › Stock Hold	Admin · System Manager
PO price check	Admin Settings › PO price check roles (empty = nobody)	Admin · System Manager
A store's users and brands	POS Profile › Applicable for Users / Brands	POS Admin · Admin
POS emails, supply warehouse	Admin Settings › POS	Admin · System Manager

Golden rule: the access sheet is the single source of truth — edits made in Role Permission Manager are read back into it. Never give a role **Write on Admin Settings** just to make a screen work.

Rights letters: **V** view · **N** new (create) · **E** edit saved records · **S** submit · **C** cancel · **D** delete · **O** only own records. Each sheet role has one **Role Profile** (role + Employee + Employee Self Service); a user may hold several.

BRD – what the business needs

Each requirement states the **problem**, what the business **needs**, how we know it is **met**, and its **status**. Click one to open it.

OBJECTIVES

- Deliver every order on time with the right material, without one order consuming another's stock.
- One place (Order Flow) for every team to see what is pending and act.
- Buy only what orders need – never twice.
- Control store cash and stock every shift.
- Keep customer, supplier and price data inside the company.
- Access agreed in writing with management.

SCOPE & STAKEHOLDERS

In scope: CRM → Sales Order → approvals → planning → purchase → subcontracting → embroidery → picking → dispatch → invoice → logistics; POS stores; access control; mobile-app integration.
Standard ERPNext (not customised): general ledger, taxes, payroll, payment engine.
Stakeholders: Management · Sales/CRM · Merchandisers · Purchase · Production · Warehouse & Packing · Accounts & Finance · Logistics · Stores · HR · 360 IT Hub.

BR-01 **Each order uses only its own material** — Done — Planning

An order may use only raw material bought for it plus free stock. Stock bought for another order stays with that order.

PROBLEM TODAY	Material bought for one order was quietly used by another, which then fell short late.
BUSINESS NEED	An order may use only raw material bought for it plus free stock. Stock bought for another order stays with that order.
ACCEPTED WHEN	• The SO RM table, PO prompts and the jobber transfer all show the same figure. • No screen offers to use another order's stock.
STATUS	Done

BR-02 **Never order more than an order needs** — Done — Purchase

Purchase Orders and open Material Requests linked to an order line never exceed its qty, drafts included.

PROBLEM TODAY	Duplicate or extra POs / MRs were raised for the same order line.
BUSINESS NEED	Purchase Orders and open Material Requests linked to an order line never exceed its qty, drafts included.
ACCEPTED WHEN	• Saving an over-quantity PO / MR is refused, naming the documents that already hold the qty. • Fetch prompts never offer more.
STATUS	Done

BR-03 **A Subcontract PO must be sendable** — Done — Subcontracting

A Subcontract PO is raised only for what the order's material on the shelf covers, all rows together.

PROBLEM TODAY	POs were raised, then the jobber transfer was stopped for lack of material.
BUSINESS NEED	A Subcontract PO is raised only for what the order's material on the shelf covers, all rows together.
ACCEPTED WHEN	• PO submit is refused when material for all rows together isn't there. • A PO that passed is never stopped at the transfer.
STATUS	Done

BR-04 **No duplicate documents** — Done — General

Only one draft per source line for PO, SCO, PR, PI, SCR, MR, DN, SI.

PROBLEM TODAY	Two drafts for the same line led to double receipts or invoices.
BUSINESS NEED	Only one draft per source line for PO, SCO, PR, PI, SCR, MR, DN, SI.
ACCEPTED WHEN	• Creating a second draft shows the existing one to open instead.
STATUS	Done

BR-05

Promised stock stays promised

Done · Stock

Stock held for an order (picked, at a jobber, bought for it) cannot be taken by anything else.

PROBLEM TODAY	Picked or reserved stock was delivered or moved for other orders.
BUSINESS NEED	Stock held for an order (picked, at a jobber, bought for it) cannot be taken by anything else.
ACCEPTED WHEN	• DN, Stock Entry, reconciliation, returns and cancels are refused when they would take held stock.
STATUS	Done

BR-06

One fulfilment route

Done · Fulfilment

Fulfilment is Pick List → Delivery Note → Sales Invoice.

PROBLEM TODAY	Direct-billing invoices and DNs gave two different sets of numbers.
BUSINESS NEED	Fulfilment is Pick List → Delivery Note → Sales Invoice.
ACCEPTED WHEN	• An Update-Stock invoice against a Sales Order is refused.
STATUS	Done

BR-07

Four-eyes approval

Done · Sales

Merchandiser approval, then final approval by a named approver who did not create the order.

PROBLEM TODAY	Orders went to production without management review.
BUSINESS NEED	Merchandiser approval, then final approval by a named approver who did not create the order.
ACCEPTED WHEN	• The creator cannot give final approval.
STATUS	Done

BR-08

Clear ownership of orders

Done · Sales

Merchandisers see their own orders and customers; they raise only subcontract POs. On a new Sales Order they may pick any enabled customer (MOM 8 Oct).

PROBLEM TODAY	Merchandisers saw and changed each other's orders.
BUSINESS NEED	Merchandisers see their own orders and customers; they raise only subcontract POs. On a new Sales Order they may pick any enabled customer (MOM 8 Oct).
ACCEPTED WHEN	• Lists and dashboard show only their orders (option: their customers' orders). • The Sales Order's Customer field offers every enabled customer.
STATUS	Done

BR-09

Master data stays inside

Done · Master data

Only Accounts may print / export customer, supplier and price data; others only pick them in forms.

PROBLEM TODAY	Customer, supplier and price lists could be exported by anyone.
BUSINESS NEED	Only Accounts may print / export customer, supplier and price data; others only pick them in forms.
ACCEPTED WHEN	• Export / print / report hidden for other roles.
STATUS	Done

BR-10

Stores see only their store

Done · POS

Store users see only their store's documents and brands.

PROBLEM TODAY	Store users saw all stores' bills and stock.
BUSINESS NEED	Store users see only their store's documents and brands.
ACCEPTED WHEN	• Lists, scans and reports filtered by store and brand.
STATUS	Done

BR-11 **Store cash is accounted for** — Done · POS

One open shift per store; cash carried closing → opening; every difference has a reason.

PROBLEM TODAY	Cash differences between shifts were not traceable.
BUSINESS NEED	One open shift per store; cash carried closing → opening; every difference has a reason.
ACCEPTED WHEN	• Store Cash Book shows each shift; mismatches in red.
STATUS	Done

BR-12 **Access agreed in writing** — Done · Access

The client-agreed access sheet decides rights and dashboard tabs, and is applied.

PROBLEM TODAY	Permissions drifted from what management approved.
BUSINESS NEED	The client-agreed access sheet decides rights and dashboard tabs, and is applied.
ACCEPTED WHEN	• Saving the sheet changes the ERP; changes made elsewhere are read back.
STATUS	Done

BR-13 **No hidden overrides** — Done · General

Rules have no override on business screens; exceptions are explicit admin settings.

PROBLEM TODAY	"Use anyway" buttons let rules be bypassed silently.
BUSINESS NEED	Rules have no override on business screens; exceptions are explicit admin settings.
ACCEPTED WHEN	• Exceptions only via Admin Settings lists (e.g. held-stock users).
STATUS	Done

BR-14 **Rates fixed on orders** — Open · Sales

Rate is read-only on Sales Order and Purchase Order (MOM 8 Oct).

PROBLEM TODAY	Rates were edited on orders after pricing.
BUSINESS NEED	Rate is read-only on Sales Order and Purchase Order (MOM 8 Oct).
ACCEPTED WHEN	• Users cannot edit the rate field.
STATUS	Open

BR-15 **Print straight after creating** — Open · General

Direct print right after creating Sales Invoice, Purchase Order, Subcontract PO and embroidery transfer (MOM 8 Oct).

PROBLEM TODAY	Users had to search for the print option after creating documents.
BUSINESS NEED	Direct print right after creating Sales Invoice, Purchase Order, Subcontract PO and embroidery transfer (MOM 8 Oct).
ACCEPTED WHEN	• A Print button appears as soon as the document is created.
STATUS	Open

BR-16 **Customer returns at the store** — Open · POS

POS return entries (MOM 8 Oct) and a return policy (Phase 2).

PROBLEM TODAY	Returns could not be recorded at the POS.
BUSINESS NEED	POS return entries (MOM 8 Oct) and a return policy (Phase 2).
ACCEPTED WHEN	• A return against a POS bill reverses stock and payment.
STATUS	Open

BR-17

Production sees subcontracting at a glance

Open · Subcontracting

A Subcontracting PO analysis report with sorting, available to production (MOM 8 Oct).

PROBLEM TODAY	No single view of subcontracting POs for the production team.
BUSINESS NEED	A Subcontracting PO analysis report with sorting, available to production (MOM 8 Oct).
ACCEPTED WHEN	• Production users open and sort the report.
STATUS	Open

BR-18

Combine orders for embroidery

Open · Embroidery

Many Sales Orders to one embroidery order; many POs to one Purchase Receipt; design name shown (MOM 8 Oct).

PROBLEM TODAY	Each Sales Order needed its own embroidery order and receipt.
BUSINESS NEED	Many Sales Orders to one embroidery order; many POs to one Purchase Receipt; design name shown (MOM 8 Oct).
ACCEPTED WHEN	• One embroidery order can carry several orders' items.
STATUS	Open

FRD — how the system does it

Each function: **who** uses it, **where** (screen), **what happens**, the **rules**, how to **check** it, and the code that enforces it (for developers).

FR-A1 **Sales Order approval workflow** — Done — Sales & approvals

Draft → Pending Merchandiser Approval → Pending Final Approval → Approved / Rejected.

WHO	Merchandiser · Final approver
WHERE	Order Flow › SO Approvals
WHAT HAPPENS	Draft → Pending Merchandiser Approval → Pending Final Approval → Approved / Rejected.
RULES	• The creator may pass the merchandiser step, never the final step. • Approval opens Verify Customer Details (addresses on this order only).
HOW TO CHECK	Create an order, approve as merchandiser, try final approval as the creator → refused.
CODE (DEVELOPERS)	`Workflow · order_flow_api`
STATUS	Done

FR-A2 **Final approvers** — Done — Sales & approvals

Listed users get the Sales Order Final Approver role automatically.

WHO	Admin
WHERE	Admin Settings › Sales Order final approvers
WHAT HAPPENS	Listed users get the Sales Order Final Approver role automatically.
HOW TO CHECK	Add a user → they see Pending Final SO Approval.
CODE (DEVELOPERS)	`order_flow_permissions`
STATUS	Done

FR-A3 **Order shared with lead owner** — Done — Sales & approvals

The lead owner can read and edit the order.

WHO	System
WHERE	Sales Order
WHAT HAPPENS	The lead owner can read and edit the order.
HOW TO CHECK	Open the order as the lead owner.
CODE (DEVELOPERS)	`so_share`
STATUS	Done

FR-A4 **Rate locked downstream** — Done — Sales & approvals

DN / SI rate equals the Sales Order rate.

WHO	System
WHERE	Delivery Note · Sales Invoice
WHAT HAPPENS	DN / SI rate equals the Sales Order rate.
RULES	• Rate 0 refused on SO, quotation, PO, PI.
HOW TO CHECK	Change a rate on an SI → reset to the order rate.
CODE (DEVELOPERS)	`lock_item_rate_to_sales_order`
STATUS	Done

FR-A5

Rate read-only

Done · Sales & approvals

Rate cannot be typed; users change the Price List Rate and the discount and Rate is worked out from them (MOM 8 Oct).

WHO	All users
WHERE	Sales Order · Sales Invoice · Purchase Order · Purchase Invoice
WHAT HAPPENS	Rate cannot be typed; users change the Price List Rate and the discount and Rate is worked out from them (MOM 8 Oct).
RULES	• Price List Rate is editable on all four. • Form rule only — mapping, Pricing Rules, dialogs and the API still set Rate.
HOW TO CHECK	Click Rate → not editable; change Price List Rate to 1,000 and Discount to 10% → Rate 900.
CODE (DEVELOPERS)	`Property Setters (custom/*_item.json) · sales_invoice.js · purchase_invoice.js`
STATUS	Done

FR-A6

Customer pick for all merchandisers

Done · Sales & approvals

Any enabled customer can be chosen while creating or editing a draft order (MOM 8 Oct); the Customer list and dashboards stay limited.

WHO	Merchandiser
WHERE	Sales Order › Customer field
WHAT HAPPENS	Any enabled customer can be chosen while creating or editing a draft order (MOM 8 Oct); the Customer list and dashboards stay limited.
RULES	• Only the field's search, the customer's details and saving the draft are opened up.
HOW TO CHECK	A merchandiser finds another merchandiser's customer in the field and saves the order; the Customer list still hides it.
CODE (DEVELOPERS)	`custom_script.picking_customer_for_sales_order`
STATUS	Done

Item Stock & Action Plan

Done · Planning

Per line: Ordered · Delivered · Still to Cover · Free Finished Stock · To Make · Next Action.

WHO	Merchandiser · Purchase
WHERE	Sales Order (Order Details tab) · Sales Tracker row
WHAT HAPPENS	Per line: Ordered · Delivered · Still to Cover · Free Finished Stock · To Make · Next Action.
RULES	• To Make = Still to Cover − Free Finished Stock.
HOW TO CHECK	Open an order; each line shows its next action.
CODE (DEVELOPERS)	`get_item_stock_details_bulk`
STATUS	Done

FR-B2 **Raw material table** Done Planning

Needed · In Stock for this Order (bought for this order + free stock) · Requested / On the Way · To Request · Status.

WHO	Merchandiser · Production
WHERE	Sales Order › under each BOM line
WHAT HAPPENS	Needed · In Stock for this Order (bought for this order + free stock) · Requested / On the Way · To Request · Status.
RULES	• Statuses: In Stock · Requested · Short N — Request RM · Not Needed. • Lines share material in line order ("used by <line> of this order"). • Other orders' stock shown in grey — "stays with them".
HOW TO CHECK	Two lines needing the same fabric → the second shows what the first used.
CODE (DEVELOPERS)	`sales_order.js · rm_alloc_used`
STATUS	Done

FR-B3 **Material Request caps** Done Planning

MR qty capped at the order line's need / the RM table's To Request.

WHO	Merchandiser · Purchase
WHERE	Material Request
WHAT HAPPENS	MR qty capped at the order line's need / the RM table's To Request.
RULES	• A draft MR already counts.
HOW TO CHECK	Request more than To Request → refused.
CODE (DEVELOPERS)	`guard_mr_item_not_over_so_need · guard_mr_rm_not_over_so_shortfall`
STATUS	Done

FR-C1 **PO never over an order line** Done Purchase & subcontracting

All POs linked to an order line together ≤ the line qty, any status, drafts included.

WHO	Purchase
WHERE	Purchase Order
WHAT HAPPENS	All POs linked to an order line together ≤ the line qty, any status, drafts included.
RULES	• Fetch Pending Sales Orders never offers more than saving allows; the Add step caps too.
HOW TO CHECK	Fetch a fully ordered line → not offered.
CODE (DEVELOPERS)	`guard_po_item_not_over_so_need · po_room_by_so_item`
STATUS	Done

FR-C2 **Subcontract PO material check** Done Purchase & subcontracting

Rows offered only when the order's RM table says In Stock; ticked rows checked together; submit refused if material for all rows isn't sendable.

WHO	Merchandiser · Purchase
WHERE	PO › Fetch Pending Sales Orders · PO submit
WHAT HAPPENS	Rows offered only when the order's RM table says In Stock; ticked rows checked together; submit refused if material for all rows isn't sendable.
RULES	• Same count as the jobber transfer (3 decimals).
HOW TO CHECK	Tick two rows sharing a fabric that covers only one → the second is refused.
CODE (DEVELOPERS)	`rm_sendable · rm_short_lines · guard_subcontract_po_rm`
STATUS	Done

FR-C3 **Create SCO & Material Transfer** Done Purchase & subcontracting

Creates the Subcontracting Order and the transfer to the jobber.

WHO	Production · Merchandiser
WHERE	Purchase Order (submitted, subcontracted)
WHAT HAPPENS	Creates the Subcontracting Order and the transfer to the jobber.
RULES	• Max You Can Send = this PO's own stock (and the over-transfer allowance). • Shows actual warehouse stock. • Sending less asks to confirm; more is refused.
HOW TO CHECK	Type more than Available for this PO → refused.
CODE (DEVELOPERS)	`get_required_raw_materials_for_po · create_subcontracting_docs`
STATUS	Done

FR-C4 **Jobber transfers protected** Done Purchase & subcontracting

A transfer cannot take picked stock or another order's material.

WHO	System
WHERE	Stock Entry (Send to Subcontractor)
WHAT HAPPENS	A transfer cannot take picked stock or another order's material.
HOW TO CHECK	Use ERPNext's Transfer Material for extra → refused.
CODE (DEVELOPERS)	`block_subcontract_transfer_of_picked_stock · flag_subcontract_rm_borrowing`
STATUS	Done

FR-C5 **No duplicate drafts** Done Purchase & subcontracting

A second draft for the same source line is refused, naming the existing one.

WHO	System
WHERE	PO · SCO · PR · PI · SCR · MR · DN · SI
WHAT HAPPENS	A second draft for the same source line is refused, naming the existing one.
HOW TO CHECK	Create a PO twice from the same MR line.
CODE (DEVELOPERS)	`draft_guard`
STATUS	Done

FR-C6 **Finished goods receipt entry** Open Purchase & subcontracting

Qty to receive starts at 0; supplier invoice number and date captured (MOM 8 Oct).

WHO	Inward · Production
WHERE	PO › Receive Goods for SCO · Purchase Receipt
WHAT HAPPENS	Qty to receive starts at 0; supplier invoice number and date captured (MOM 8 Oct).
HOW TO CHECK	Open the receive window → qty 0, invoice fields present.
CODE (DEVELOPERS)	—
STATUS	Open

FR-C7

Subcontracting PO analysis report

Open · Purchase & subcontracting

Analysis of subcontracting POs with sorting; access for production (MOM 8 Oct).

WHO	Production
WHERE	Report
WHAT HAPPENS	Analysis of subcontracting POs with sorting; access for production (MOM 8 Oct).
HOW TO CHECK	A production user opens and sorts the report.
CODE (DEVELOPERS)	—
STATUS	Open

FR-C8

Direct print after create

Done · Purchase & subcontracting

"Print it now?" right after the document is created (SI / PO on submit, transfer on first save, embroidery work orders from every dialog); Yes opens the PDF. Embroidery rows on the dashboard show their notes and a Print button (MOM 8 Oct).

WHO	Accounts · Purchase · Production
WHERE	Sales Invoice · PO · Subcontract PO · Embroidery work order / transfer
WHAT HAPPENS	"Print it now?" right after the document is created (SI / PO on submit, transfer on first save, embroidery work orders from every dialog); Yes opens the PDF. Embroidery rows on the dashboard show their notes and a Print button (MOM 8 Oct).
HOW TO CHECK	Submit a PO → asked to print; Yes opens the PDF.
CODE (DEVELOPERS)	`public/js/print_prompt.js`
STATUS	Done

FR-D1

Pick List claims free stock only

Done · Stock & dispatch

A draft claims only free stock; submit asks the qty actually picked (only down).

WHO	Merchandiser · Packing
WHERE	Pick List
WHAT HAPPENS	A draft claims only free stock; submit asks the qty actually picked (only down).
HOW TO CHECK	Pick more than free → reduced.
CODE (DEVELOPERS)	`fit_pick_list_to_free`
STATUS	Done

FR-D2

Held stock protected

Done · Stock & dispatch

Held stock cannot leave for anything else; listed users get a warning instead.

WHO	System
WHERE	DN · SI · Stock Entry · Reconciliation · returns · cancel
WHAT HAPPENS	Held stock cannot leave for anything else; listed users get a warning instead.
HOW TO CHECK	DN for another order on held stock → refused.
CODE (DEVELOPERS)	`stock_hold`
STATUS	Done

FR-D3

Locked derived rows, one route

Done · Stock & dispatch

Rows from a Pick List / DN are locked; Update-Stock SI against an order is refused.

WHO	Accounts
WHERE	Delivery Note · Sales Invoice
WHAT HAPPENS	Rows from a Pick List / DN are locked; Update-Stock SI against an order is refused.
HOW TO CHECK	Edit qty on a derived DN row → reset.
CODE (DEVELOPERS)	`guard_dn/si_items_locked_to_pick_list · guard_so_fulfillment_route_lock`
STATUS	Done

FR-D4

Embroidery from order stock

Done · Stock & dispatch

Full Piece from draft Pick List qty; the Pick List is held until goods return; one allowance per (order, item).

WHO	Merchandiser · Production
WHERE	Sales Order › Send to Embroidery
WHAT HAPPENS	Full Piece from draft Pick List qty; the Pick List is held until goods return; one allowance per (order, item).
HOW TO CHECK	Send from a submitted Pick List → asks Revert to Draft.
CODE (DEVELOPERS)	`so_embroidery`
STATUS	Done

FR-D5

Multi-order embroidery

Open · Stock & dispatch

Many Sales Orders to one embroidery order; many POs to one Purchase Receipt; design name in the tab (MOM 8 Oct).

WHO	Production
WHERE	Embroidery Work Order · Purchase Receipt
WHAT HAPPENS	Many Sales Orders to one embroidery order; many POs to one Purchase Receipt; design name in the tab (MOM 8 Oct).
HOW TO CHECK	Create one embroidery order from two Sales Orders.
CODE (DEVELOPERS)	—
STATUS	Open

FR-E1

Shift opening

Done · POS

Store auto-filled; cash only; carried from last closing; reason if different; one open shift per store.

WHO	Store manager
WHERE	POS › Create POS Opening Entry
WHAT HAPPENS	Store auto-filled; cash only; carried from last closing; reason if different; one open shift per store.
HOW TO CHECK	Open with a different cash amount → reason asked.
CODE (DEVELOPERS)	`pos_cash.opening_validate`
STATUS	Done

FR-E2

Shift closing

Done POS

Built on the server; steps cash counted / why / taken out; left carried; closing email with Excel.

WHO	Store manager
WHERE	POS Closing Entry
WHAT HAPPENS	Built on the server; steps cash counted / why / taken out; left carried; closing email with Excel.
RULES	• Every difference needs a reason.
HOW TO CHECK	Count less than expected → reason required.
CODE (DEVELOPERS)	`pos_closing · pos_cash · pos_notify`
STATUS	Done

FR-E3

Store & brand scope

Done POS

Store users see their stores' records and brands everywhere.

WHO	POS users
WHERE	Lists, barcode scan, reports
WHAT HAPPENS	Store users see their stores' records and brands everywhere.
HOW TO CHECK	A store login sees only its store's bills.
CODE (DEVELOPERS)	`pos_scope · pos_report_scope · pos_brand_filter`
STATUS	Done

FR-E4

Store stock requests: HO approval, dispatch, receipt

Done POS

Store MR (transfer from VV Puram) → Send for HO approval → HO approves / rejects → HO's draft transfer (In Transit) → the store checks and submits it. Status on the MR; board on POS / POS Admin / POS HO workspaces.

WHO	Store manager · HO approvers
WHERE	Material Request · Stock Entry · Stock Requests board
WHAT HAPPENS	Store MR (transfer from VV Puram) → Send for HO approval → HO approves / rejects → HO's draft transfer (In Transit) → the store checks and submits it. Status on the MR; board on POS / POS Admin / POS HO workspaces.
RULES	• Approver roles in Admin Settings › POS. • Free stock only (held stock excluded).
HOW TO CHECK	Store submits its own request → refused; HO / POS Admin submits the store's transfer → refused.
CODE (DEVELOPERS)	`pos_request.py · pos_requests_board.js`
STATUS	Done

FR-E5

Store Cash Book

Done POS

One line per shift; mismatches in red.

WHO	Store manager · POS Admin
WHERE	Report
WHAT HAPPENS	One line per shift; mismatches in red.
HOW TO CHECK	Run for a store and a date range.
CODE (DEVELOPERS)	`report/store_cash_book`
STATUS	Done

FR-E6

POS return entries

Open POS

Create return entries against POS bills (MOM 8 Oct).

WHO	Store manager
WHERE	Point of Sale
WHAT HAPPENS	Create return entries against POS bills (MOM 8 Oct).
HOW TO CHECK	Return an item → stock and payment reversed.
CODE (DEVELOPERS)	—
STATUS	Open

FR-F1

Access sheet

Done Access

Document rights (V N E S C D O) and Order Flow tabs (✓ / A) per role; Sheet / By document / By role views; saving applies.

WHO	Admin · System Manager
WHERE	Roles & permissions page
WHAT HAPPENS	Document rights (V N E S C D O) and Order Flow tabs (✓ / A) per role; Sheet / By document / By role views; saving applies.
RULES	• Typed confirmations for resets. • Create (N) and Edit (E) are separate — e.g. create a customer but not edit it after saving.
HOW TO CHECK	Untick E for a role → it can create but not edit.
CODE (DEVELOPERS)	`access_sync · access_worksheet · access_reverse`
STATUS	Done

FR-F2

Master data protection

Done Access

View gives read / select; print / export only Accounts; pick-only users get link search without list or form.

WHO	System
WHERE	Customer · Supplier · Item Price
WHAT HAPPENS	View gives read / select; print / export only Accounts; pick-only users get link search without list or form.
HOW TO CHECK	A non-accounts role has no Export on Customer.
CODE (DEVELOPERS)	`master_guard`
STATUS	Done

FR-F3

Admin Settings readable by the app

Done Access

Roles with Read read it through the API (mobile app); the desk form and print only for editors.

WHO	System
WHERE	API
WHAT HAPPENS	Roles with Read read it through the API (mobile app); the desk form and print only for editors.
HOW TO CHECK	DAC CRM user reads via the API → OK; opens the form → refused.
CODE (DEVELOPERS)	`admin_settings.has_permission`
STATUS	Done

FR-F4 **Stock tab for more teams** Open Access

Stock Tracker tab for Merchandiser, Inward and Production (MOM 8 Oct).

WHO	Admin
WHERE	Access sheet › Order Flow tabs
WHAT HAPPENS	Stock Tracker tab for Merchandiser, Inward and Production (MOM 8 Oct).
HOW TO CHECK	Those roles see the Stock tab.
CODE (DEVELOPERS)	`Access sheet`
STATUS	Open

Non-functional requirements

- **One count everywhere** – screens answering the same question use the same server function, so no screen shows one number and another a different one.
- **Server-side rules** – every rule is checked on the server; screens only explain.
- **Precision** – raw-material checks use the stock precision (3 decimals).
- **Performance** – company-wide lists are computed in batches, not row by row.
- **Real time** – Order Flow and the Sales Order refresh when a linked document changes.

Project status

Where the project stands: progress, what is left per source, and the next highest-priority work. Click anything to filter the task list below.

All tasks

Delivered work, the open actions from the **8 Oct 2026 meeting** (Operation Flow Trial, client place – Dac operation team, Chandra ma'am, Mohan, Hithashini, Namitha), and the **Phase 2** list. Filter by status, source, module, phase or priority; click a column title to sort.

# ▲	STATUS	MODULE	TASK	SOURCE	PHASE	PRIORITY	DATE	OWNER	REMARKS
1	Done	POS	Store stock requests: HO approval, HO's transfer, the store checks and submits it; Stock Requests board on POS / POS Admin / POS HO workspaces	Delivered	1		2026-10-13	360ithub	
2	Done	Order Flow	Finance: Receive / Pay prompt (bank charges, TDS, write-off, confirmation); totals on rounded total; custom date range and Customer / Supplier filters on every tab	Delivered	1		2026-10-14	360ithub	
3	Done	Order Flow	Finance shows the invoice's own status (Unpaid / Partly Paid / Overdue / Paid…) and Delivered / Received; Sales Invoice has no Get Items From menu	Delivered	1		2026-10-14	360ithub	
4	Done	Order Flow	POS documents hidden by default; "Show POS documents" toggle on Finance › Receivables, Logistics and Tracker › MRs	Delivered	1		2026-10-02	360ithub	

# ▲	STATUS	MODULE	TASK	SOURCE	PHASE	PRIORITY	DATE	OWNER	REMARKS
5	Done	Order Flow	Merchandiser sees own Sales Orders; "Show my customers' orders" toggle on every tab	Delivered	1		2026-10-02	360ithub

62	To Do	RFID	RFID – material inward, auto-billing by box, item variation, stock taking	Phase 2 list	2				Discussion first
63	Hold	POS	POS counters 7–10 have no POS Profile	Open decision		Low	2026-10-02	Client	Parked

Developer handbook

Everything a developer needs to change this system safely: how it is built, where each feature lives, step-by-step recipes for common changes, how to test, and what to do when something doesn't work.

1 · Start here — your first day

READ IN THIS ORDER

1. This guide: **Overview → Business flow → Roles** (1 hour).
2. Order flow rules — the rules every screen enforces.
3. The app's `CLAUDE.md` and `docs/README.md`, then the doc for the area you will touch (see the feature map).
4. `hooks.py` — every place the app plugs into ERPNext.
5. Open a Sales Order and the Order Flow dashboard on the developer copy and follow one order end to end.

SET-UP

- Bench with Frappe / ERPNext v15 and the apps listed in Overview; the custom app is `apps/erp_dacsinc_custom` (GitHub 360ITHUBPVTLTD/erp_dacsinc_custom, current branch `360ithub_masterv2`).
- Site = a restore of a recent live backup, with **developer mode on**, `mute_emails` on and the scheduler off.
- Run `bench start` (or `bench serve`) and sign in as Administrator.
- To act as another role, use a test user that holds only that role's profile.
- Never connect a developer copy's email accounts to real mailboxes.

Three habits that keep this project healthy: (1) one rule = one server function, used by every screen that shows it; (2) every rule is enforced on the server (hooks), the screen only explains; (3) update `docs/` and this guide in the same change.

2 · Architecture

Layers

Browser	Form scripts `public/js/<doctype>.js` (via `doctype_js` in hooks), desk pages `page/order_flow`, `page/roles_and_permissions`, web pages `www/*.html`
API	`@frappe.whitelist()` functions the screens call — `order_flow_api.py`, `custom_script.py`, `purchase_order.py`, `pos_*.py`, `access_*.py`
Rules	`doc_events` in `hooks.py` (validate / before_submit / before_cancel guards) and permission hooks (`permission_query_conditions`, `has_permission`)
ERPNext	Standard DocTypes, overridden only where listed in `override_whitelisted_methods`
Config	**Admin Settings** (approvers, tab roles, POS emails, held-stock users…), **access sheet** (`access/agreed_access.json`), `custom/*.json` (fields & property setters)

What happens when a user saves / submits a document

1. The form script may warn early (e.g. qty above the order's room) — *advice only*.
2. `before_insert`: duplicate-draft check (`draft_guard`).
3. `validate`: caps and locks (order-line caps, rate lock, derived-row lock, procurement purpose).
4. `before_submit`: hard rules (held stock, route lock, Subcontract PO material, POS approvals).
5. ERPNext's own logic runs (our app's hooks run **before** ERPNext's — app order).
6. `on_update / on_submit`: side effects (emails, sharing, Pick List updates) and `broadcast_order_flow_change` → Order Flow and open Sales Orders refresh.

Who sees which records

Document rights come from the access sheet (Custom DocPerm). On top, code narrows rows: merchandiser scope (`custom_script`), store scope (`pos_scope`), master-data guard (`master_guard`). Query reports skip these hooks, so POS reports are cut in `pos_report_scope`.

3 · Feature map — where things live

Search a feature, screen, file or function. "Front-end" is the JavaScript that draws it; "Server" is the Python that computes or enforces it.

FEATURE	SCREEN	FRONT-END	SERVER	DOC	TEST
Order Flow dashboard (tabs, lists, actions)	/app/order-flow	`page/order_flow/order_flow.js (OF_TABS)`	`order_flow_api.py: get_sales_tracker, get_pending_approvals, get_purchase_flow, get_jobwork_flow, get_pick_list_flow, get_stock_tracker, get_billing_flow, get_accounts_flow, get_logistics_flow`	`order-flow-dashboard.md`	`flowtest.py, lifecycle.py`

4 · Change playbooks

Step-by-step recipes for the changes asked most often. Click one to open it.

P01

Add a custom field to a document

A new piece of data must be stored on a standard document.

STEPS

1. Add it in Customize Form on the developer copy (developer mode on), or add it to a `create_custom_fields` list called from `after_migrate`.
2. Export: `bench --site <site> export-customizations` for the module *Erp Dacsinc Custom* (or the export button) — it lands in `custom/<doctype>.json`.
3. Commit the JSON. Live gets it on migrate (sync_on_migrate).

FILES `custom/*.json` · `hooks.after_migrate`

WATCH OUT Customisation sync never deletes fields — removing one needs a patch that deletes the Custom Field.

P02

Add a validation rule (block something on save / submit)

A business rule must be enforced, e.g. "rate must be read-only".

STEPS

1. Write a function `def guard_x(doc, method=None)` in the module of that area; `frappe.throw(...)` with a message that says what to do instead.
2. Register it in `hooks.py › doc_events › <DocType>` under `validate` (always) or `before_submit` (only on submit).
3. If a screen also shows it, make the screen call the same function (or its numbers) — don't re-implement the rule in JS.
4. Add a PASS/FAIL check to the matching test suite; update the doc and the FRD here.

FILES `hooks.py · the area's module`

WATCH OUT Order matters: our hooks run before ERPNext's. Read-only on screen is not enough — check on the server too.

P03

Make a field read-only (e.g. rate on SO / PO)

Users must not edit a field.

STEPS

1. Add a Property Setter (Customize Form → Read Only) and export it to `custom/<doctype>.json`; for child tables set it on the item doctype.
2. If prices must still be set by the system (price list), also add a server check that resets or refuses a changed value for non-admin roles.
3. Check every place the field is filled (fetch dialogs, mapped documents) still works.

FILES `custom/*.json · a validate hook`

WATCH OUT Some dialogs write the field from code — read-only only stops typing.

P04

Change who sees an Order Flow tab or sub-tab

A team needs (or must lose) a dashboard tab.

STEPS

1. Open /roles-and-permissions › Order Flow dashboard as Admin; set ✓ (see) or A (act) for the role; Save.
2. Saving writes Admin Settings (`of_tab_*_roles`, `of_sub_*_roles`) and, in developer mode, the bundle `access/agreed_access.json`.
3. Commit the bundle — live re-applies it on migrate (`access_sync.sync_from_bundle`).

FILES `access/agreed_access.json · order_flow_permissions.py`

WATCH OUT Admins always see every tab — test with a normal user.

P05

Add a new Order Flow tab or sub-tab

A new list is needed on the dashboard.

STEPS

1. Front-end: add it to `OF_TABS` in `page/order_flow/order_flow.js` (panel, loader, render).
2. Server: a `get_<name>_flow` in `order_flow_api.py` that calls `_guard_tab` and respects the merchandiser scope.
3. Permissions: add Admin Settings fields `of_tab_<key>_roles` / `_act_roles`, the keys in `access_sync.TAB_KEYS / SUBTAB_KEYS / TAB_DOCS`, and the row in `WS_TABS` of `www/roles-and-permissions.html`.
4. Rebuild the worksheet PDFs (`scripts/make_worksheet_pdfs.sh`) and bump their `?v=`.

FILES `order_flow.js · order_flow_api.py · access_sync.py · roles-and-permissions.html`

WATCH OUT Keep <code>stage_key</code> values stable; only labels may change.

P06

Give a role access to a document

A role needs to view / create / edit / submit a document.

STEPS

1. On /roles-and-permissions › Document access, tick the letters (V N E S C D O) for that role and document; Save (Admin).
2. Linked documents the form needs (lookups) are granted automatically as read-only.
3. Commit `access/agreed_access.json` — live applies it on migrate.

FILES `access_sync.py`

WATCH OUT Don't edit Role Permission Manager for sheet roles — it is read back into the sheet, but the sheet stays the source of truth.

P07

Add a new role

A new team or job needs its own role.

STEPS

1. Create the Role and tick **Access Sheet Role** (`custom_dacsinc_access_role`) — a matching Role Profile is created automatically.
2. Fill its column on the access sheet (documents and tabs) and Save.
3. Give users the profile on /app/roles-and-permissions.
4. If live needs it too: add it to `access_sync.INITIAL_ROLES` (or a patch) so it is created on migrate.

FILES `access_sync.py`

WATCH OUT Admin is never a sheet column — it sees everything.

P08

Change a planning number (stock, RM, PO room)

A figure on the SO, PO or MR looks wrong.

STEPS

1. Find the one server function behind it (feature map). Fix it there — every screen that shows it follows.
2. Keep the sales-order scope; drafts count where the doc says they do.
3. Re-run the comparison: SO RM table = PO prompt = SCO dialog on the same data, including a tight-stock case (rolled back).
4. Update `so-rm-po-subcontracting-flow.md` .

FILES `custom_script.get_item_stock_details_bulk · purchase_order.rm_sendable · order_flow_api._rm_stock_pools`

WATCH OUT Never fix a number only in JS — the next screen will disagree.

P09

Add a report (and give store users access)

A new report is needed.

STEPS

1. Create a Script Report in module *Erp Dacsinc Custom* on the developer copy (developer mode) — files land in `report/<name>/` .
2. Set its `ref_doctype` to a document the target roles can *read* (own-records-only rights are not enough for Frappe to run a report).
3. For POS users add it to `POS_REPORTS_ALLOWED` in `pos_report_scope.py` ; their rows are then cut to their stores and brands.
4. Add it to Overview › Pages & links here.

FILES `report/ · pos_report_scope.py`

WATCH OUT Query reports skip permission hooks — filter in the report or rely on pos_report_scope.

P10

Add or change an email

A notification or report email is needed.

STEPS

1. Build the HTML in the area's module (see `pos_notify.closing_mail_html` for the house style: tables + inline styles).
2. Send from a background job (`frappe.enqueue(..., queue="short", enqueue_after_commit=True)`).
3. Recipients in Admin Settings, not in code.

FILES `pos_notify.py · notifications.py`

WATCH OUT On the developer copy keep <code>mute_emails</code> on.

P11

Fix data on live (one time)

Existing records must be corrected once.

STEPS

1. Write a patch in `patches/` with `execute()`; make it safe to run twice and give it a `dry_run` mode in the module.
2. Add it to `patches.txt` under `[post_model_sync]`. To run a patch again later, add a comment to its line.
3. Rehearse on a fresh live backup and read the output before deploying.

FILES `patches/ · patches.txt`

WATCH OUT Patches run once per site; print what they changed.

P12

Change the POS screen or closing

Store users need a change in POS.

STEPS

1. POS page: `public/js/pos_page_extend.js` patches ERPNext's classes before the page builds (never edit ERPNext's files).
2. Rules for opening / closing: `pos_cash.py` (validate hooks); closing build: `pos_closing.py`; form: `pos_closing_entry.js`.
3. Run `pos_cash_test.py`, `pos_scope_test.py`, `pos_notify_test.py`.

FILES `pos_*.py · pos_page_extend.js`

WATCH OUT Test as a store user, not Administrator.

P13

Edit a vendor app (frappe / erpnext / hrms)

A change can't be made from the custom app.

STEPS

1. First try a hook, an override in `override_whitelisted_methods`, or a JS patch from the custom app.
2. If a core edit is unavoidable, make it and record file, reason and date in `docs/core-modifications.md` at the bench root.

FILES `docs/core-modifications.md`

WATCH OUT Vendor apps carry local uncommitted edits — don't revert them.

P14

Update this guide and task status

A task is finished, or a flow / role / rule changed.

STEPS

1. Edit `www/project-guide.html`: the `TASKS`, `BRD`, `FRD`, `FEATURE_MAP` arrays in its script, or the text of a tab.
2. Rebuild the PDF with `scripts/make_worksheet_pdfs.sh` and bump `project-guide.pdf?v=`.

FILES `www/project-guide.html`

5 · Rules & conventions

- **One rule, one function.** If two screens answer the same question (e.g. "how much raw material may this order use"), they call the same server function. Never copy a formula into JS.
- **Server enforces, screen explains.** Every rule lives in a hook; the dialog only hides or warns.
- **Find the live function first.** Many functions have old commented-out copies, and some have a second live copy in `purchase_order_custom.py`. Search for the method path the screen calls (e.g. `erp_dacsinc_custom.purchase_order.validate_and_get_items_for_po`).

- **Scope by sales order.** Every demand / supply figure is keyed by (item, warehouse, sales order) — never by item alone.
- **No silent overrides.** No "use anyway" button; exceptions only through Admin Settings lists.
- **Same words everywhere.** Raw material: "bought for this order", "free stock", "Short N — Request RM".
- **Fields from code.** New fields via `create_custom_fields` (after_migrate) or export to `custom/*.json`; deleting a field needs a patch.
- **Vendor apps.** Don't edit frappe / erpnext / hrms / india_compliance unless unavoidable; record it in `docs/core-modifications.md`.
- **Docs in the same change.** `docs/*.md` describe how it works now (not a changelog); update this guide's tabs and task status.
- **Git.** Work inside the app repo; never `git add -A` at the bench root; never commit or push for someone without being asked.

6 · Testing

Tests are Python scripts that run inside the site and **roll back**, so they never leave data behind. They live in `.scratch/order-flow-strict-rules/` at the bench root.

How to run one: copy it into the app package as a temporary module (e.g. `_cc_t.py`), run `bench --site <site> execute erp_dacsinc_custom._cc_t.run`, read the `PASS` / `FAIL` lines, then delete the copy. Every test must stub `frappe.db.commit` first — some saves (Admin Settings) commit and would survive the rollback.

SUITE	COVERS	RUN AFTER CHANGING
`access_sync_test.py`	Access sheet → permissions, dependencies, profiles, master data	Access sheet rules, roles, profiles
`access_reverse_test.py`	Role Permission Manager / Admin Settings → sheet read-back; added documents	Anything in access_reverse / access_worksheet
`tab_sync_test.py`	Order Flow tab / sub-tab roles ⇄ Admin Settings, can_act_tab	Dashboard tabs, order_flow_permissions
`permission_probe.py`	Submits real documents per role and rolls back — finds missing rights	Any permission change
`flowtest.py · lifecycle.py`	One order end to end: SO → MR → PO → SCO → receipt → pick → DN → SI	Planning, guards, Order Flow
`stock_hold_test.py`	Held stock, Pick List fit, embroidery holds	stock_hold.py, so_embroidery.py, Pick List
`pos_scope_test.py`	Store / brand scope on POS documents, items, customers	pos_scope.py
`pos_stock_test.py`	Store stock requests, transfer approvals, defaults	pos_notify.py, pos_stock.js
`pos_request_test.py`	Store request: send, HO approve / reject, transfer, only the store submits, purchase shortfall, board	pos_request.py
`pos_notify_test.py`	POS MR mail, closing report mail and Excel	pos_notify.py
`pos_cash_test.py`	Opening carry-forward, counted closing, reasons, Store Cash Book	pos_cash.py, pos_closing.py, report
`addstock_test.py`	Warehouse › Add Stock	warehouse_add_stock.py

- **Screen checks:** headless Chrome with a temporary session for a test user; check for script errors and take a screenshot. Drop the session afterwards.
- **Planning changes:** on the same data, the SO RM table, the PO prompt and the SCO dialog must give the same answer — compare them (tight-stock case included, inside a rolled-back transaction).
- **Performance changes:** compare old vs new output on a copy of live data before replacing a loop.

7 · Troubleshooting

? My JavaScript change doesn't show

Form scripts are cached: hard refresh (Ctrl+Shift+R). For files in `app_include_js/css` run `bench build --app erp_dacsinc_custom`. Then `bench --site <site> clear-cache`.

? My Python change doesn't apply

Restart bench (`bench restart` on servers; the dev server reloads by itself). Background jobs need the workers restarted.

? A web page (www) shows old content

`bench --site <site> clear-website-cache`.

? "No permission for X" for a role

Check the role's cell on the access sheet; if the form needs a linked document, the sheet grants read automatically — re-save the sheet. Never fix it by giving Write on Admin Settings.

? Access sheet changes didn't reach live

The bundle `access/agreed_access.json` must be committed; it is applied on migrate when its content or `access_sync.RULES_VERSION` changes.

? "Over the Sales Order's Own Need" on save

All POs linked to that order line already total its qty (any status, drafts included). The message names them — work on that PO, or add an unlinked row for extra.

? "Raw Material Not Available" on Subcontract PO submit

Material for all rows together isn't this order's (bought for it + free). Reduce rows or Request RM; the SO RM table shows the same figure.

? Two screens show different numbers

One of them uses its own formula. Find both functions (feature map) and make the screen call the shared one.

? A test changed real data

It didn't stub `frappe.db.commit` (Admin Settings save commits). Restore from the backup taken before testing; fix the test.

? A field I deleted is back after migrate

Customisation sync never deletes — write a patch that deletes the Custom Field, and remove it from `custom/*.json`.

? A whitelisted method ignores my new argument

Frappe drops arguments the function doesn't declare — add it to the function signature.

? frm.set_intro shows two messages

It adds to the message area — call `frm.set_intro("")` first.

Never share `site_config.json` (passwords, encryption key); never run `bench migrate` on live, `git reset --hard`, `git clean`, commit or push for someone without being asked; never test on live.

Deploy & operations

How a change reaches live, and what to check afterwards.

1 **Build & test on the developer copy**
A local site restored from a live backup. Update the docs and this guide. Run the relevant test suites.

A local site restored from a live backup. Update the docs and this guide. Run the relevant test suites.

2 **Rehearse on a fresh live backup**
Restore locally, mute emails and stop the scheduler, run migrate, read the patch output.

Restore locally, mute emails and stop the scheduler, run migrate, read the patch output.

3 **Commit & push the app**
Inside the app's own repository, on the release branch.

Inside the app's own repository, on the release branch.

4 **Deploy on live**
Pull, migrate, restart web and workers — after the stores close (the POS clean-up closes shifts opened before the deploy day).

Pull, migrate, restart web and workers — after the stores close (the POS clean-up closes shifts opened before the deploy day).

5 **Check after deploy**
Order Flow loads for each role; one PO fetch; one store opening carries the right cash; mobile app works; update task statuses here.

Order Flow loads for each role; one PO fetch; one store opening carries the right cash; mobile app works; update task statuses here.

What runs on migrate

- **Patches** (once per site): access sheet set-up and apply, POS store scope, user roles from the client sheet, HR profile, party defaults, POS clean-up of stale shifts, and others.
- **after_migrate** (every migrate): cash-drawer fields, access-sheet sync from `access/agreed_access.json`, Order Flow page roles, final approver role, procurement / logistics / embroidery fields, store names, flagged profiles.
- **Customisations** from `custom/*.json`. Sync never deletes fields.

Safe read-only checks

- `stock_hold.report_missing` — stock claimed but missing.
- `user_role_sheet.apply(dry_run=True)` — what the user-role sheet would change.
- `pos_cash.close_stale_shifts(dry_run=True)` — what the POS clean-up would do.

Older pages that differ

Process flow & diagram (Aug 2026) are older:

- They show direct billing from the Pick List (Sales Invoice with Update Stock) — **now refused**: Pick List → DN → SI only.
- They create a Pick List on SO submission — now when stock is available (Create Pick List).
- They count pending MRs / POs as raw material for a Subcontract PO — now only material on the shelf, bought for the order or free.
- They use team names; the ERP roles are in the Roles tab.

Glossary

TERM	MEANING
FG / RM	Finished good / raw material.
BOM item / trade item	An order line made through a jobber (has a BOM) / an item bought and resold.
To Make	Still to Cover − Free Finished Stock. Drives the raw material need.
Bought for this order	Raw material received against this Sales Order. Stays with the order.
Free stock	On the shelf, bought for no order, not picked, not at a jobber.
Held stock	Stock claimed by a Pick List, a jobber or an order's purchase. Others cannot take it.
Request RM	Create a Material Request for this order's raw material shortfall.
Jobber	Subcontractor (Supplier with Is Jobber).
Subcontract PO / SCO / SCR	Purchase Order for the jobber's work / Subcontracting Order / Subcontracting Receipt.
Send to Subcontractor	Stock Entry moving raw material to the jobber.
EWO · FP · Panel	Embroidery Work Order · Full Piece (finished pieces) · Panel (cut panels).
Over-collection	The jobber returns more than ordered, within the allowed %, booked as extra.
Route lock	Fulfilment is always Pick List → DN → SI.
V N E S C D O	Access sheet rights: View, New, Edit, Submit, Cancel, Delete, Only own records.
✓ / A	Can see a dashboard tab / can see and act.
Pick-only	Can choose a master in a form field, but has no list or form.
Store	A POS Profile; its users and brands decide what a store login sees.
Carried forward	Cash left in the drawer at the last closing; the next opening starts from it.
LR No · Signed Copy	Transport receipt number · attached proof of delivery, on the Sales Invoice.
Admin Settings	The settings record: approvers, tab roles, POS emails, held-stock users, customer field roles.
MOM	Minutes of meeting — the client meeting's action list.
Phase 1 / Phase 2	Current operations go-live / the next set of improvements.
BRD / FRD	Business Requirements (what the business needs and why) / Functional Requirements (what the system does, where, and how to check it).
